

We hereby confirm that the tyres "Bridgestone Ecopia 95/80 R16" are approved for vehicles participating in iESC 2018 although they do not comply with the current regulations.

Please note Section 2.2.10 in the iESC 2018 regulations:

- Tyres must be suitably designed and rated to withstand the loads and forces imposed by the vehicle mass, speed capability, and braking.
- Tyres must have a tread pattern across the section width that normally comes into contact with the road, at least 1.5 mm deep in a band that runs continuously around the circumference of the tyre, and must be free of any apparent defect.
- Tyres must be used in accordance with their respective manufacturer's recommendations at all times.

However in full wet conditions, the use of 'rain' tires is obligatory. Race control will decide when a completely wet condition is met and treaded tires is obligated.

Kind Regards  
Laurenz Holthoff
